

DANIEL DIPIETRO JR.

Kingston, RI | 401-425-1943 | ddipietro8227@gmail.com | github.com/dcdjr | linkedin.com/in/daniel-dipietro-jr/ | dcdjr.me

EDUCATION

University of Rhode Island

B.S. in Computer Science, Planned Data Science Minor

Expected May 2029

- **GPA 3.99/4.0 | Schilling Scholar** | Honors College | Phi Eta Sigma
- Relevant Coursework: Data Structures & Abstractions, Fundamentals for Cybersecurity, Computer Programming, Mathematical Tools for Computing, Calculus II
- Additional Technical Training: Harvard CS50

TECHNICAL SKILLS

Languages: C, C++, Python, SQL, TypeScript

Web, Backend & Databases: React, FastAPI, Flask, REST APIs, HTML/CSS, Bootstrap, SQLite

Systems & Networking: Linux, POSIX, Bash, TCP/IP, HTTP, sockets

Security: Packet analysis, log analysis, Linux troubleshooting, network reconnaissance, incident investigation fundamentals

Developer Tools: Git, GitHub, Neovim, VS Code

EXPERIENCE

Student Information Technologist, URI Memorial Union

Jan 2026—Present

- Troubleshoot hardware, software, operating system, and connectivity issues for students and staff in a live campus IT environment.
- Support Memorial Union technology operations by resolving user issues, maintaining website accessibility standards, and assisting with routine technical and security procedures.
- Communicate technical issues clearly to non-technical users while escalating unresolved problems through appropriate support channels.

PROJECTS

Apogee—Proof-of-Skill Ledger, React, TypeScript, FastAPI, SQLite, Gemini API | [GitHub](#)

- Built a full-stack AI learning tracker for **Fidelity FidHacks 2026** using React, TypeScript, FastAPI, SQLite, and Gemini to transform student achievements into structured skill evidence stored in a persistent ledger.
- Led end-to-end implementation under a hackathon deadline, designing the frontend submission/review flow, backend API endpoints, SQLite persistence layer, and AI analysis pipeline.

Mind—Local-First AI Assistant, Python | [GitHub](#)

- Built a local-first AI assistant in Python with persistent memory, workspace file context, and a CLI-based agent workflow for reasoning over personal files and project directories.
- Implemented modular subsystems for memory storage, semantic retrieval, tool execution, and session/task history to support more capable long-running assistant behavior.

HTTP Server, C++ | [GitHub](#)

- Built a multithreaded HTTP/1.1 server in C++ using POSIX sockets, raw TCP connections, and concurrent client handling.
- Implemented request parsing, static file serving, MIME type detection, structured error responses, and defensive handling for malformed requests.

TCOM 8-Bit Emulator, C | [GitHub](#)

- Built an 8-bit computer emulator in C with registers, memory, a program counter, status flags, and a custom instruction execution loop.
- Implemented core instructions including LOAD, STORE, ADD, SUB, and HALT, with memory safety checks to prevent program code from being overwritten during execution.

LEADERSHIP & COMPETITIONS

Technical Content Lead, URI Cyber Club

Sept 2025—Present

- Lead technical workshops and help develop hands-on cybersecurity labs for 10+ club members.
- Coordinate technical content, competition preparation, and weekly event execution.
- Delivered technical presentations on Flipper Zero usage and log analysis for National Cyber League preparation.

National Cyber League (NCL) Competitor

Mar 2026

- Placed in the **top 12.5% nationally** in a hands-on cybersecurity competition covering packet analysis, log investigation, web security, cryptography, and digital forensics.
- Applied security workflows involving traffic inspection, forensic analysis, vulnerability identification, and system investigation.

Hack@URI Mini Hackathon, 2nd Place

Oct 2025

- Placed 2nd in a team hackathon by building an AI-powered multi-tool for tutoring, practice, and interactive learning workflows.
- Contributed to project design, feature planning, and presentation under a limited development timeline.

NCAE Cyber Games Competitor

Feb 2026

- Competed in a team-based cybersecurity event focused on infrastructure management, networking, Linux systems, and system analysis.
- Solved hands-on challenges involving log review, service troubleshooting, and network/system configuration.
